

D.I.Y.

Do It Yourself

Basic Insecticidal Soap

The Ingredients

- 1 1/2 teaspoon any type of liquid soap (i.e. castile, dish washing soap, ivory, etc.)
- 1 quart water

Method

1. Combine all ingredient in a spray bottle.

To Use

Set the spray bottle nozzle to stream and spray infested areas of the foliage. This insecticidal soap works great against some of the most common garden pests such as: aphids, earworms, borers, mites, whiteflies, maggots, moths, and beetles. *Note: By adding 1/4 cup of isopropyl alcohol to the above recipe you can create a very mild but effective insecticidal soap that treats scale insects. The alcohol works against the scale's shell.*
