■ **Where does the energy come from that stirs up our atmosphere?** It comes from the Sun whose radiated sunlight passes through the atmosphere and heats up land and oceans, rivers, forests and fields. The warmed land and water radiates some of the heat, back up into the air resulting in a warming of the air that is close to the ground or water. The warmed air rises and cooler air sinks down to take its place. This rising of warm air and sinking of cooler air is the basis for most movement in the air masses of the atmosphere.

■ **Does the radiation from the Sun heat up Earth evenly all around the globe?** No. Sunlight shines more or less directly down to Earth at the equator but passes at an angle through the atmosphere toward the poles. This means that while the sun passes through about 50 miles of atmosphere at the equator, it passes through much more atmosphere in order to reach the more northern and southern latitudes. The result is that the ground is much warmer around the equator than at the poles. This differences in the temperatures causes air mass movement when warm tropical air rises and cooler northern

■ **Is warming the only factor that causes air masses to move?** No. Air masses are affected by the spinning of the Earth on its axis as it orbits the Sun. The spinning of Earth causes air masses to rotate. In the southern hemisphere the air masses rotate clockwise; in the northern hemisphere they rotate counterclockwise. This phenomenon can be seen in weather satellite photographs. When the rotation becomes a tight, rapidly spinning whorl the air mass is called a cyclone. Cyclones are our biggest storms.

■ **Is the climate of Earth still changing?** Yes. The climate of Earth has been in a constant state of change ever since the planet was first formed and it is still changing. The change happens relatively slowly and we have only recently developed the tools and the knowledge necessary to discover the patterns of change over past eras and to record the gradual changes that are happening during our own lifetimes.

■ **What happened in between the ice ages of past eras?** During the Pleistocene era, extending back about 600,000 years there were four ice ages and in between these the temperature was about 5 degrees F. warmer than today. Before that time, going back about 100 million years to the Cretaceous period, global temperatures appear to have been perhaps 18 degrees F. warmer than today. Ocean levels rose and water spilled over onto the land creating differently shaped land masses. The possibility that in our current era human activity is causing global warming is a hotly debated and so far undecided issue.

COME CHECK OUT THE NEW "FARMER'S" IN MAPLETON, YOUR LOCAL SOIL & HYDROPONIC SUPPLY LOCATION. WE NOW OFFER FOXFARM, DOWN TO EARTH, BOTANICARE, GENERAL HYDROPONICS, DUCTING AND FITTINGS, ALL SORTS OF NEW STUFF. OPEN MON. - SAT. 9-6:30, WE'D LOVE TO SEE YOU!

## TUNNELVISIONS

(by: MARK)

Over the years, I frequently practice my bird calling techniques on my front porch. I've become quite good and now when I start calling, various songbirds curiously come to the trees and bushes of my front yard and we serenade each other. The other day I brought my favorite lunch to the porch, which consists of cold parsnips on pumpernickel with a large, cold glass of

Tang. Nature's serenade, consuming this gourmet concoction, serendipity. Basking in this moment, I began to think about how music has been a big part of contributing to the quality of my life. . . . .

Nestled in the shadows of the skyscrapers of Cleveland, Ohio, on the shores of Lake Erie, is one of the most unique pieces of architecture in all of the U.S. It is the brainchild of master building designer, I.M. Pei, considered to be the best at his craft, worldwide, of modern times. It is the home of the Rock "N" Roll Hall of Fame. Now, before you non-rockers writhe and cringe, and, hey, you know who you are, hear me out. As in all evolutions, Rock "N" Roll began well over a century ago. It began as a slow melding and morphing of numerous ethnic musics. The real turning point came with the heavy influence of Rhythm and Blues and, yes, Country. At any given time, there are 25,000 exhibits on display. Many of these displays rotate in and out and go to other venues. Hence, every time you visit, there are new things to see and do. This is a world-class museum in a world-class building in a world-class setting. I know that most of you will never get there but I bet they have a great website.

Finally, briefly, I'm looking for someone to travel with me to Topeka, Kansas, for a 3-day, once in a lifetime festival. It's headliner will be world renown artists, the Captain and Tenille! Wow! Guests will include Neil Sedaka, Engelbert Humperdink and a true icon, Herb Alpert and the Tijuana Brass. If interested, you can contact Howard and he can get ahold of me. Best contact time for him is between 2 a.m. And 4 a.m. any day of the week. I look forward to hearing from you.

Johnny Sundstrom's new novel, *For SPACIOUS SKIES*, is now available at the Deadwood Country Market and from the author for \$20. Beginning with one of the last battles of the War between the States, this story follows its characters on an epic journey across the country, along the Oregon Trail, until they reach their destination in the Jordan Valley of SE Oregon. Here are the constant struggles faced overcoming nature's challenges, the sometimes violent human tensions encountered along the way, and the heartfelt aspirations for a new life among the ranchers, miners and Indians of the still-untamed frontier.

2014

### Road work on Highway 36 beginning August 4th:

ODOT is adding "safety edges" along eight miles of Highway 36 between Low Pass at Milepost 34.4 and Lawrence Road at Milepost 42.5. This will reduce incidences of vehicles veering off the road hitting an abrupt edge and propelling the vehicle across the road and possibly into other vehicles as they attempt to steer back on the highway. They are also paving 180 approaches for roads or driveways that access Highway 36.

I have cut so much grass and weeds this season already that I have released more water and "carbon" into the atmosphere than all the vegetarians in Deadwood combined!  
Keith
